

Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set

From Academic Press

Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set From Academic Press

Nanostructured materials is one of the hottest and fastest growing areas in today's materials science field, along with the related field of solid state physics. Nanostructured materials and their based technologies have opened up exciting new possibilites for future applications in a number of areas including aerospace, automotive, x-ray technology, batteries, sensors, color imaging, printing, computer chips, medical implants, pharmacy, and cosmetics. The ability to change properties on the atomic level promises a revolution in many realms of science and technology. Thus, this book details the high level of activity and significant findings are available for those involved in research and development in the field. It also covers industrial findings and corporate support. This five-volume set summarizes fundamentals of nano-science in a comprehensive way. The contributors enlisted by the editor are at elite institutions worldwide.

Key Features

* Provides comprehensive coverage of the dominant technology of the 21st century

* Written by 127 authors from 16 countries, making this truly international

* First and only reference to cover all aspects of nanostructured materials and nanotechnology

Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set From Academic Press Bibliography

- Sales Rank: #4879572 in Books
- Published on: 1999-11-01
- Ingredients: Example Ingredients
- Original language: English
- Number of items: 5
- Dimensions: 8.51" h x 11.99" w x 9.17" l, 1.10 pounds
- Binding: Hardcover
- 3461 pages

Editorial Review

Review

"Nanotechnology, with its multidisciplinary nature and numerous potential applications, may be one of the most difficult fields in which to stay informed. Such a new area would typically have to wait several years for a disciplined, well-organized survey to appear, but Hari Singh Nalwa has already compiled a five-volume overview, Handbook of Nanostructured Materials and Nanotechnology....The contributors have exerted considerable effort to include introductory material that will benefit readers who are crossing disciplinary lines. Anyone interested in learning how these materials can be made, how they can be characterized, and what they can and might be able to do will likely be well served by this reference."

From the Back Cover

Frequently called the materials science of the twenty-first century, the field of nanostructured materials and technology has made extraordinary progress over the past decade. A dramatic increase in research activities has created the need for a reference in this area. **Handbook of Nanostructured Materials and Nanotechnology** is the first and most authoritative reference work published to date.

Including the most outstanding contribution in the field, with 62 state-of-the-art review chapters from more than 140 authors from sixteen countries, the Handbook addresses recent developments in synthesis, processing, fabrication, spectroscopy, theory, electrical and optical properties, and device applications of nanostructured materials, providing the most comprehensive coverage of nanostructured materials and nanotechnology ever compiled.

With more than 10,300 bibliographic citations and nearly 12,000 drawings, photographs, tables, chemical structures and equations, this handbook is an incomparable reference source for scientists as well as graduate and advanced-level undergraduate students working in chemistry, physics, biology, materials science, spectroscopy, polymer science, ceramic, electronic, mechanical, chemical, aerospace, and optical engineering.

About the Author

Dr. H. S. Nalwa is the Managing Director of the Stanford Scientific Corporation, Los Angeles, California. He was Head of Department and R&D Manager at the Ciba Specialty Chemicals Corporation in Los Angeles (1999-2000) and a staff scientist at the Hitachi Research Laboratory, Hitachi Ltd., Japan (1990-1999). He has authored more than 150 scientific articles and 18 patents on electronic and photonic materials and devices. He has edited the following books: *Ferroelectric Polymers* (Marcel Dekker, 1995), *Nonlinear Optics of Organic Molecules and Polymers* (CRC Press, 1997), *Organic Electroluminescent Materials and Devices* (Gordon & Breach, 1997), *Handbook of Organic Conductive Molecules and Polymers, Vol. 1-4* (John Wiley & Sons, 1997), *Low and High Dielectric Constant Materials Vol. 1-2* (Academic Press, 1999), **Handbook of Advanced** *Electronic and Photonic Materials and Devices, Vol. 1-10* (Academic Press, 1999), *Handbook of Advanced Electronic and Photonic Materials and Devices, Vol. 1-10* (Academic Press, 2000), *Advanced Functional Molecules and Polymers, Vol. 1-4* (Gordon & Breach, 2001), *Photodetectors and Fiber Optics* (Academic Press, 2001), *Supramolecular Photosensitive and Electroactive Materials* (Academic Press, 2001), *Nanostructured Materials and Nanotechnology* (Academic Press, 2001), *Handbook of Thin Film Materials, Vol. 1-5* (Academic Press, 2001), *and Handbook of Surfaces and Interfaces of Materials, Vol. 1-5* (Academic Press, 2001), The Handbook of Nanostructured Materials and Nanotechnology (Academic Press, 2001), *Handbook of Thin Film Materials, Vol. 1-5* (Academic Press, 2001), The Handbook of Nanostructured Materials and Nanotechnology (Academic Press, 2001), Handbook of Materials, Vol. 1-5 (Academic Press, 2001). The Handbook of Nanostructured Materials and Nanotechnology (Vol. 1-5) edited by him received the 1999 Award of Excellence from the Association of American Publishers.Dr. Nalwa serves on the editorial board of the Journal of Macromolecular Science-Physics, Applied Organometallic Chemistry (1993-1999), International Journal of Photoenergy, and Photonics Science News. He was the founder and Editor-in-Chief of the *Journal of Porphyrin*

Users Review

From reader reviews:

Shiela Steen:

The experience that you get from Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set could be the more deep you rooting the information that hide within the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to recognise but Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set giving you excitement feeling of reading. The copy writer conveys their point in a number of way that can be understood by simply anyone who read that because the author of this reserve is well-known enough. That book also makes your own personal vocabulary increase well. So it is easy to understand then can go along, both in printed or e-book style are available. We advise you for having this Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set instantly.

Deanna Nance:

Hey guys, do you wishes to finds a new book to study? May be the book with the subject Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set suitable to you? The book was written by renowned writer in this era. The particular book untitled Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Setis a single of several books that will everyone read now. That book was inspired a number of people in the world. When you read this publication you will enter the new way of measuring that you ever know ahead of. The author explained their thought in the simple way, so all of people can easily to recognise the core of this book. This book will give you a large amount of information about this world now. In order to see the represented of the world within this book.

Amanda Bell:

Reading can called imagination hangout, why? Because when you find yourself reading a book mainly book entitled Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set your head will drift away trough every dimension, wandering in each aspect that maybe unfamiliar for but surely will end up your mind friends. Imaging just about every word written in a book then become one type conclusion and explanation that maybe you never get ahead of. The Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set giving you one more experience more than blown away the mind but also giving you useful data for your better life in this era. So now let us teach you the relaxing pattern is your body and mind will likely be pleased when you are finished reading it, like winning an activity. Do you want to try this extraordinary investing spare time activity?

Jamie Ault:

Reading a guide make you to get more knowledge as a result. You can take knowledge and information from the book. Book is composed or printed or outlined from each source in which filled update of news. With this modern era like at this point, many ways to get information are available for you actually. From media social such as newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just looking for the Handbook of Nanostructured Materials and Nanotechnology, Five-Volume Set when you desired it?
