Aquaculture Production Systems (World Aquaculture Society Book series)

By James H. Tidwell

Aquaculture is an increasingly diverse industry with an ever-growing number of species cultured and production systems available to professionals. A basic understanding of production systems is vital to the successful practice of aquaculture.

Published with the **World Aquaculture Society**, *Aquaculture Production Systems* captures the huge diversity of production systems used in the production of shellfish and finfish in one concise volume that allows the reader to better understand how aquaculture depends upon and interacts with its environment.

The systems examined range from low input methods to super-intensive systems. Divided into five sections that each focus on a distinct family of systems, *Aquaculture Production Systems* serves as an excellent text to those just being introduced to aquaculture as well as being a valuable reference to well-established professionals seeking information on production methods.

Editorial Review

Review

“The book provides both a valuable introduction to aquaculture for new students or the curious layman and serves as an indispensable reference for the seasoned academic or industry professional seeking the latest comprehensive information addressing aquaculture production systems and how they interact with the environment.” (*Journal of aquatic Food Product Technology*, 27 February 2013)

“It will, however, be a useful resource for students and early-career aquaculture scientists. In addition, the book should be of interest to non-aquaculture professionals and practitioners who wish to have a compilation volume that gives concise overviews of the production systems that are used to farm aquatic animals.” (*Aquaculture International*, 1 October 2012)

From the Back Cover

Aquaculture is an increasingly diverse industry with an ever-growing number of species cultured and production systems available to professionals. A basic understanding of production systems is vital to the successful practice of aquaculture. *Aquaculture Production Systems* provides a valuable survey of key production systems that will allow the reader to better understand how aquaculture depends upon and interacts with its environment.

Aquaculture Production Systems looks at a variety of systems currently used in the production of shellfish and finfish. These systems range from low input methods to super-intensive systems. Divided into five sections that each focus on a distinct family of systems, *Aquaculture Production Systems* will serve as an excellent text to those just being introduced to aquaculture as well as being a valuable reference to well-established professionals seeking information on production methods.

About the Author

James H. Tidwell is Professor and Chair of the Division of Aquaculture at the Aquaculture Research Center at Kentucky State University.

Users Review

From reader reviews:

Lori Johnson:
