Internet & Intranet Security (Artech House Computer Security Series)

By Rolf Oppliger

Internet & Intranet Security (Artech House Computer Security Series) By Rolf Oppliger

This extensively revised, new edition of the 1998 Artech House classic, "Internet and Intranet Security", offers professionals an up-to-date and comprehensive understanding of the technologies that are available to secure TCP/IP-based networks, such as corporate intranets or the Internet, and their associated applications. It addresses firewall technologies to help practitioners provide access control service, and discusses the cryptographic protocols used to provide today's communication security services. From TCP/IP networking and cryptographic fundamentals, to firewall technologies, communication security protocols, and public key infrastructures, this handy reference offers practical guidance in utilizing cutting-edge technologies to secure various applications in the field of e-commerce and e-business. The book explores the rationale behind the security technologies that have been proposed and deployed on the Internet, and shows how to implement security mechanisms and corresponding protocol specifications.

Editorial Review

From the Author
When I started to work on Internet and intranet security a couple of years ago, the situation was comparably simple. There were some authentication and key distribution systems available that made people believe the Internet would become secure if only these systems were used and widely deployed (e.g., Kerberos). It was at this time that I wrote Authentication Systems for Secure Networks, a companion book also published by Artech House. But after having written the book, I realized that alternative techniques and mechanisms had been developed to provide Internet and intranet security. For example, firewalls started their triumphal march that has continued until today. Also, cryptographic security protocols for the Internet, transport, and application layer had been developed, proposed, and partly implemented. Consequently, I realized that the use of authentication systems is just one possibility to address Internet security, and that there are other possibilities! as well. In this situation, I decided to write Internet and Intranet Security to give a more comprehensive overview about currently available security techniques and mechanisms for TCP/IP-based networks.

The book has been written to serve the needs of computer and network professionals that have interest in understanding, establishing, and supporting secure TCP/IP-based networks. I also hope that the book provides sufficient background to help security professionals propose approaches to secure commercial applications for the Internet. The book is tutorial in nature but still requires some familiarity with the fundamentals of computer networks and distributed systems, as well as cryptography and the use of cryptographic protocols in networked and distributed environments.

About the Author
Rolf Oppliger is the founder and owner of eSECURITY Technologies Rolf Oppliger (www.esecurity.ch) and works for the Swiss Federal Strategy Unit for Information Technology (FSUIT) . He is also the author of Security Technologies for the World Wide Web (Artech House, 1999) , Internet and Intranet Security (Artech House, 1998), and Authentication Systems for Secure Networks (Artech House, 1996). Dr. Oppliger is the computer security series editor at Artech House. He received his M.Sc. and Ph.D. in Computer Science from the University of Berne, Switzerland, and the Venia Legendi in Computer Science from the University of Z?rich, Switzerland).

Users Review

From reader reviews:

Kelly Blow:

Book is definitely written, printed, or illustrated for everything. You can recognize everything you want by a publication. Book has a different type. To be sure that book is important point to bring us around the world. Beside that you can your reading ability was fluently. A e-book Internet & Intranet Security (Artech House Computer Security Series) will make you to always be smarter. You can feel far more confidence if you can know about every thing. But some of you think in which open or reading the book make you bored. It's not make you fun. Why they can be thought like that? Have you trying to find best book or suitable book with you?

John Pace:

The knowledge that you get from Internet & Intranet Security (Artech House Computer Security Series) will be the more deep you searching the information that hide inside words the more you get considering reading it. It does not mean that this book is hard to understand but Internet & Intranet Security (Artech House Computer Security Series) giving you buzz feeling of reading. The copy writer conveys their point in specific way that can be understood through anyone who read the item because the author of this e-book is well-known enough. This specific book also makes your current vocabulary increase well. Making it easy to understand then can go along with you, both in printed or e-book style are available. We highly recommend you for having that Internet & Intranet Security (Artech House Computer Security Series) instantly.

Virginia Hughes:

This Internet & Intranet Security (Artech House Computer Security Series) is great publication for you because the content that is full of information for you who all always deal with world and possess to make decision every minute. This kind of book reveal it information accurately using great organize word or we can say no rambling sentences inside. So if you are read it hurriedly you can have whole info in it. Doesn't mean it only provides straight forward sentences but difficult core information with beautiful delivering sentences. Having Internet & Intranet Security (Artech House Computer Security Series) in your hand like getting the world in your arm, info in it is not ridiculous a single. We can say that no book that offer you world inside ten or fifteen moment right but this guide already do that. So , it is good reading book. Hello Mr. and Mrs. active do you still doubt this?

Andrew Taylor:

Do you like reading a book? Confuse to looking for your best book? Or your book ended up being rare? Why so many issue for the book? But any kind of people feel that they enjoy with regard to reading. Some people likes examining, not only science book but also novel and Internet & Intranet Security (Artech House Computer Security Series) or perhaps others sources were given expertise for you. After you know how the truly amazing a book, you feel would like to read more and more. Science publication was created for teacher or perhaps students especially. Those guides are helping them to include their knowledge. In some other case, beside science book, any other book likes Internet & Intranet Security (Artech House Computer Security Series) to make your spare time more colorful. Many types of book like this one.
