BEA WebLogic Workshop Kick Start

By Joseph Weber, Mark Wutka

BEA WebLogic Workshop Kick Start By Joseph Weber, Mark Wutka

BEA WebLogic Workshop is a rapid application development tool that makes building Java-based Web service applications simple. With just a basic foundation of Java programming, you can use WebLogic Workshop to develop Web services. *BEA WebLogic Workshop Kick Start* provides everything you need to get started with WebLogic Workshop, including a quick Java primer and appendixes covering the essentials of XML, SOAP and WSDL. Learn the features of WebLogic Workshop and review hundreds of code examples, and explore the inner workings of this new tool.

The book's CD-ROM contains all the source code and examples from the book, plus a 90-day trial version of BEA WebLogic Platform, which includes WebLogic Workshop.

Foreword

Web services have attracted much attention recently as the next "big thing" in computing technology. Vendors of all shapes and sizes have announced their support for Web services technologies, and every month a new Web services conference is popping up somewhere on the globe. With all this hype and attention, sometimes it¿s difficult to really discover what Web services are, where they fit in your company, what the business case is, and how you can actually get started taking advantage of this technology.
BEA has been working with customers to answer many of these questions, and provide solutions that enable companies to easily construct Web services that meet their needs today. Contrary to the common conception of Web services as a consumer-focused technology, Web services may have the greatest potential as a technology inside enterprises as a new way of tying disparate applications together using standards-based technologies. To make Web services really work in the enterprise, however, it¿s essential that they meet core enterprise requirements: Web services applications have to exist in a constantly changing IT environment where different applications are built and modified by different people on different schedules. They must accommodate everything from modern J2EE-based applications, to legacy systems, to applications at business partners. They must be able to handle rich and complex information and transmit it between internal and external applications. They must easily interact with other

applications to leverage existing investments. They must be robust, reliable, and they must perform. Perhaps most important of all, they have to be easy to build. For Web services to flourish within an organization, all developers will need to be able to build Web services that meet these requirements.

BEA WebLogic Workshop Kick Start introduces you to BEA¿s new WebLogic Workshop product, a development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust, enterprise features of the WebLogic J2EE application server. WebLogic Workshop provides a graphical tool that makes it easy to visualize, develop, and test Web service applications and visual controls that dramatically simplify access to existing resources like databases, packaged applications, Enterprise Java Beans, and other Web services. The Workshop framework provides out-of-the-box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the "public contract" that a Web service offers to other applications. This makes Workshop Web services flexible in the face of a constantly changing IT environment. Workshop also provides built-in support for asynchronous messaging so that Web service applications can carry on rich, two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious XML DOM programming. All of these capabilities can be accessed in a simple, declarative fashion that enables all developers not just J2EE experts to get started building Web services today.

Even if you are new to the Java programming language, or have never built a J2EE application before, I think you¿ll be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general, and teach you the few Java and J2EE concepts you¿ll need to know along the way. Rich with examples, this book illustrates the power of Web services, and will help you realize the value they can bring to your company.

About the Author

Joseph Weber has been working with Java full-time since its early alpha stages and has helped advise a number of Fortune 500 companies on the goals of Java. Joe has served on advisory committees for and taught classes at universities in the Midwest, and continues to be a strong advocate for Java in the educational environment. Most recently, Joe contributed to Sams *Java Web Services Unleashed* (067232363X), due in April 2002.

Mark Wutka is a consultant who specializes in helping companies get the most out of Java. He has built numerous Java, JSP and servlet applications for clients including Delta Airlines, and has taught classes, written articles and books, and given lectures. Recently he has written or contributed to *Special Edition Using J2EE* (0789725037) and *Java Web Services Unleashed* (067232363X).

Users Review

From reader reviews:

Catherine Walters:

As people who live in the actual modest era should be up-date about what going on or info even knowledge to make them keep up with the era which can be always change and make progress. Some of you maybe may update themselves by looking at books. It is a good choice to suit your needs but the problems coming to an individual is you don't know which you should start with. This BEA WebLogic Workshop Kick Start is our recommendation so you keep up with the world. Why, because this book serves what you want and want in this era.

Arnulfo Walls:

Now a day individuals who Living in the era everywhere everything reachable by interact with the internet and the resources included can be true or not involve people to be aware of each data they get. How individuals to be smart in getting any information nowadays? Of course the reply is reading a book. Studying a book can help men and women out of this uncertainty Information especially this BEA WebLogic Workshop Kick Start book because book offers you rich facts and knowledge. Of course the information in this book hundred percent guarantees there is no doubt in it you probably know this.

James Cooper:

The reserve untitled BEA WebLogic Workshop Kick Start is the book that recommended to you to see. You can see the quality of the reserve content that will be shown to you. The language that publisher use to explained their ideas are easily to understand. The writer was did a lot of study when write the book, and so the information that they share to you is absolutely accurate. You also can get the e-book of BEA WebLogic Workshop Kick Start from the publisher to make you a lot more enjoy free time.

Jennifer Lewis:

The book with title BEA WebLogic Workshop Kick Start has a lot of information that you can discover it. You can get a lot of advantage after read this book. This kind of book exist new expertise the information that exist in this guide represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. This book will bring you in new era of the syndication. You can read the e-book in your smart phone, so you can read it anywhere you want.
